for over 20 years!**

SUPER GEL TIRE LUBRICANT

by QUE-MONT

Super Gel Lubricant fights rust on steel rims and treats corrosion on alloy rims.

- Makes tire mounting and dismounting much easier.
- Increases the sealing of the tire joints.
- Places the tire perfectly on the rim.
- Designed to treat rubber.
- Does not drip, therefore very economical.
- Does not freeze in cold weather.

SUPER GEL tire lubricant

TECHNICAL SHEET

SUPER GEL tire lubricant is a premium lubricant made from synthetic products and additives. Antioxidant and anti-corrosion additives have been added to provide an excellent barrier against rust, in addition to an additive that protects the rubber from drying out.

Also, SUPER GEL tire lubricant is a water repellent, meaning it wicks away moisture and preserves steel and aluminum surfaces.

SUPER GEL tire lubricant has been added with strong lubricating agents which favor the positioning of the tire on the rim in a perfect way with a cold resistance of -20 to -25 degrees Celsius.

Application :

Before application, the surface must be clean, that is to say free from dirt or any other substance that could reduce the tire seal.

Manufactured by Que-Mont Equipment Inc.
